# Office Action Summary

Application No.

09/538,617

Applicant(s)

GRAHAM ET AL.

Examiner

Guillermo Perez

Art Unit

2834

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM  
THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-29 is/are pending in the application.
- 4a) Of the above claim(s) 14-25 is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-12 and 26-29 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 29 March 2000 is/are: a) ☐ accepted or b) ☒ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.  
If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

## Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s) 6.
- 4) ☐ Interview Summary (PTO-413) Paper No(s) \_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other:

## DETAILED ACTION

### *Drawings*

Figures 10b and 10c should be designated by a legend such as --Prior Art-- because only that, which is old, is illustrated. See MPEP § 608.02(g).

### *Specification*

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 250 words. It is important that the abstract not exceed 250 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1, 9-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Margrain et al. (U. S. Pat. 3,805,104).

Referring to claim 1, Margrain et al. disclose an inductive coil (12) for an electromotive device comprising:

a pair of concentric conductive sheet metal windings (A,R) separated by an encapsulating material (11), each of the windings (A,R) consisting of a plurality of axially extending conductive bands (A,R) each being separated from an adjacent conductive band by a space (see figure 2), each of the conductive bands (A,R) of one of the windings being coupled to one of the conductive bands of the other winding (see figure 1).

Referring to claim 9, Margrain et al. disclose that the conductive bands (A,R) of the one of the windings forms a half circuit (A in figure 1).

Referring to claim 10, Margrain et al. disclose that the conductive bands (A,R) of the other winding forms a complimentary half circuit (R).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 2, 6-7 and 26-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Margrain et al. in view of Lifschitz (U. S. Pat. 3,698,079).

Margrain et al. disclose an inductive coil as described on item 1 above. However, Margrain et al. do not disclose that the encapsulating material comprises polyimide. Margrain et al. do not disclose that each of the spaces separating the conductive bands is less than 2.5 times the thickness of each of the conductive bands. Margrain et al. do not disclose that each of the spaces between the conductive bands is about 1 - 1.5 times the thickness of each of the conductive bands. Margrain et al. do not disclose that each of the conductive bands having a tensile strength greater than 40,000 psi. Margrain et al. do not disclose that each of the conductive bands having a yield strength greater than 30, 000 psi. Margrain et al. do not disclose that each of the conductive bands having a hardness greater than a Brunell number of 70.

Lifschitz discloses that the encapsulating material comprises polyimide (column 2, lines 56-62). Lifschitz' invention has the purpose of providing an insulating base to the coils.

It would have been obvious at the time the invention was made to modify the inductive coil of Margrain et al. and provide it with the encapsulating material disclosed by Lifschitz for the purpose of providing an insulating base to the coils.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the coil dimensions as claimed since it has been held that where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation. *In re Aller*, 220 F.2d 454, 456, 105 USPQ 233, 235 (CCPA 1955).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the material properties as claimed since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin*, 125 USPQ 416.

3. Claims 3-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Margrain et al. in view of Karol (U. S. Pat. 3,650,021).

Margrain et al. disclose an inductive coil as described on item 1 above. However, Margrain et al. do not disclose a non-conductive filament wrapped around an outer surface of the one of the windings. Margrain et al. do not disclose that the nonconductive filament comprises fiberglass. Margrain et al. do not disclose that a thickness of the non-conductive filament is about 0.00030-0.00075 inch.

Karol discloses a non-conductive filament (11) wrapped around an outer surface of the one of the windings (10). Karol discloses that the nonconductive filament comprises fiberglass (column 2, lines 1-2). Karol's invention has the purpose of supporting the windings.

It would have been obvious at the time the invention was made to modify the inductive coil of Margrain et al. and provide it with the fiberglass filament disclosed by Karol for the purpose of supporting the windings.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the filament with a thickness of about 0.00030-0.00075 inch since it has been held that where the general conditions of a claim are disclosed in

the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation. *In re Aller*, 220 F.2d 454, 456, 105 USPQ 233, 235 (CCPA 1955).

4. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Margrain et al. in view of Toshiba (JP 05328678A).

Margrain et al. disclose an inductive coil as described on item 1 above. However, Margrain et al. do not disclose that each of the conductive sheet metal windings comprises precision machined and rolled copper.

Toshiba discloses that each of the conductive sheet metal windings (4) comprises precision machined and rolled copper (see abstract). The invention of Toshiba has the purpose of improving dimensional accuracy between the respective coils.

It would have been obvious at the time the invention was made to modify the inductive coil of Margrain et al. and provide it with the precision machined and rolled copper disclosed by Toshiba for the purpose of improving dimensional accuracy between the respective coils.

5. Claims 11-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Margrain et al. in view of W. Angele (U. S. Pat. 3,209,187).

Margrain et al. disclose an inductive coil as described on item 1 above. Margrain et al. disclose a commutator having a plurality of current conducting segments, each of the segments being electrically coupled to one of the conductive bands. However, Margrain et al. do not disclose a flywheel coupled inside the windings adjacent the

Art Unit: 2834

commutator, and a shaft axially coupled inside the windings. Margrain et al. do not disclose that the flywheel comprises anodized aluminum.

W. Angele discloses a flywheel (66) coupled inside the windings (14) adjacent the commutator (28), and a shaft (16) axially coupled inside the windings (14). W. Angele's invention has the purpose of supporting the armature.

It would have been obvious at the time the invention was made to modify the inductive coil of Margrain et al. and provide it with the flywheel disclosed by W. Angele for the purpose of supporting the armature.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the flywheel of anodized aluminum since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin*, 125 USPQ 416.

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Guillermo Perez whose telephone number is (703) 306-5443. The examiner can normally be reached on Monday through Thursday and alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nestor Ramirez can be reached on (703) 308 1371. The fax phone numbers for the organization where this application or proceeding is assigned are (703)

Application/Control Number: 09/538,617  
Art Unit: 2834
